

NOTICE: ENMET CALIBRATION GAS CUSTOMERS:

During 2011 we will be transitioning from the 17 liter, 240 psig Calibration Gas cylinders to the 34 liter, 500 psig cylinders; this will result in a slightly higher price.

Since there is no difference in either the type of thread connection or the physical size of the two cylinders, there is no difference in the Calibration Hardware required.

Existing Calibration Hardware can be used interchangeable with both types of cylinders.

The transition to the new 34 liter cylinders is expected to take place in the first 3 to 6 months of 2011.

Please contact ENMET Customer Service if you have any questions.
